

## IN THE CLAIMS

Please enter the following amendments to the claims

1. (Currently amended) A method of ~~providing a test tool for~~ generating test scripts comprising the steps of:

providing test code for testing deterministic behavior of an application;~~and~~

providing test code for testing ~~non-deterministic~~ dynamic behavior within said application by providing test code for each of one or more acceptable alternate behaviors associated with said ~~non-deterministic~~ dynamic behavior; and

aggregating said test code for testing deterministic behavior of an application and said test code for testing dynamic behavior within said application into a test script.

2. (Original) The method of claim 1 wherein said step of providing test code for testing one or more acceptable alternate behaviors is done graphically.

3. (Original) The method of claim 2 wherein said step of providing test code for testing one or more acceptable alternative behaviors comprises a graphical interface wherein icons represent said acceptable alternate behaviors.

4. (Original) The method of claim 3 further comprising the step of using arrows to graphically represent the paths to icons representing said acceptable alternate behaviors.

5. (Currently amended) The method of claim 1 wherein said ~~test~~ test script is used for testing Interactive Voice Response (IVR) applications.

6. (Original) The method of claim 1 wherein said step of providing test code for testing one or more acceptable alternate behaviors is provided separately and is referenced by said test code.

7. (Currently amended) A computer program product comprising a computer usable medium having computer readable code thereon comprising:

instructions for generating test code for testing deterministic behavior of an application;

instructions for generating test code for testing ~~of non-deterministic~~dynamic behavior by testing one or more acceptable alternative behaviors associated with said ~~non~~dynamic-deterministic behavior; and

instructions for aggregating said test code for testing deterministic behavior of an application and said test code for testing dynamic behavior within said application into a test script.

8. (Original) The computer program product of claim 7 wherein said test code for testing one or more acceptable alternate behaviors is provided through a graphical interface.

9. (Original) The computer program product of claim 8 wherein said test code for testing one or more acceptable alternative behaviors is utilized by a graphical interface wherein icons represent said acceptable alternate behaviors.

10. (Original) The computer program product of claim of claim 8 wherein arrows are used to graphically represent the paths to icons representing said acceptable alternate behaviors.

11. (Original) The computer program product of claim 7 wherein said application comprises an Interactive Voice Response (IVR) application.

12. (Original) The computer program product of claim 7 wherein said test code for testing one or more acceptable alternate behaviors is provided as a separate entity and is referenced by said test code.
